JOBST®

Comfort, Health and Style!

JOBST® Elvarex® Soft Custom

As experts in the field of lymphology, we developed JOBST® Elvarex® Soft custom-made for lower extremities and for the arm. This soft, flat-knit compression garment is the ideal addition to the JOBST® Elvarex® product assortment, particularly well-suited for patients with light to moderate Lymphedema.

JOBST® Elvarex® Soft allows patients with Lymphedema to live life the comfortable way.

- soft and skin-friendly
- easy to don
- offers excellent anatomical fit
- therapeutically effective

JOBST® Elvarex® Soft: Living with lymphedema the skin-friendly way.

The unique, knitted fabric of JOBST® Elvarex® Soft is made of soft textured yarn. This specialized yarn combines skin-protecting softness and excellent breathability. JOBST® Elvarex® Soft is particularly well-suited for patients who suffer from dry, sensitive or fragile skin.

JOBST® Elvarex® Soft: Living with lymphedema the easy way.

Knitted construction, designed especially to maximize the softness of the textured yarn, creates an extremely smooth fabric surface. Latex-free JOBST® Elvarex® Soft is very comfortable to wear, as well as easy to don. Comparative product testing* proves that JOBST® Elvarex® Soft is easier to put on than other brands of compression stockings.

JOBST® Elvarex® Soft: Living with lymphedema the efficient way.

This compression stocking combines easy donning with proven medical efficacy. As well as softness, JOBST® Elvarex® Soft offers optimum efficacy in the treatment of mild to moderate lymphedema, as it combines the right compression with the correct level of fabric stiffness. JOBST® Elvarex® Soft is both extremely comfortable and convenient to wear.

* Laboratory test results illustrate a product's performance under controlled conditions. Results in actual use may vary. These results were from a competitive test of garments for lower extremities. Conducted by BSN-JOBST, data available at request.

JOBST® Elvarex® Soft Armsleeve

Comfort and softness for the arm

The JOBST® Elvarex® Soft Armsleeve (CG) is not only comfortable and soft, but due to its high level of air permeability gives higher breathability and is particularly kind to the skin.

The 3-D knitting technology ensures an anatomically correct fit to maximize upper arm therapy. This guarantees optimum fit and hold during movement. The armsleeve gives optimum hold in the retrol transition zone of the arm so that this area is also covered without any difficulty and manages with optimum medical compression.

The specially designed relief zone at the wrist provides the most comfortable edging possible which does not roll up or constrict at the wrist. It has been designed so that the JOBST® Elvarex® Soft Armsleeve can also be worn in conjunction with a compression glove (e.g. JOBST® Elvarex®/JOBST® Elvarex® Soft Seamless).

The comfortable edge at the upper arm is a newly developed knitted edging. This has been designed without an edging seam which ensures the armsleeve will not roll up or constrict the skin, enhancing patient comfort.

In the elbow area a special knitting design ensures an anatomically correct fit. This is particularly important in sensitive areas and provides a significant reduction in material folding during movement. This reduces constriction and guarantees greater comfort.

Made for compliance

Secure hold and perfect fit: A range of band options

JOBST® Elvarex® Soft Armsleeve is available without silicone dotted band as standard. However, it is also available with a range of silicone dotted band options.

The Comfort Silicone Dotted Bands inside, are fully matched to the JOBST® Elvarex® Soft fabric. Thanks to its special design, the Comfort Silicone Dotted Band inside, is non-bulky and helps to prevent constrictions. Thin Comfort Silicone Dotted Band 2.5 cm, inside, full width.

Thin Comfort Silicone Dotted Band 2.5 cm, inside, 3/4-width. Suitable for patients with underarm sensitivity.

Silicone Dotted Band 2.5 cm, on top, full width.

JOBST® Elvarex® Soft garments for lower extremities are soft and comfortable

The features which support the distinct skin-friendliness and high comfort for JOBST® Elvarex® Soft lower extremity garments include:

The specially designed edging of the foot garment ensures the stocking will not roll up or constrict the foot.

The inner side of the seam has been designed to be particularly soft, through a new construction using a specialized sewing yarn. This makes the inner side of the seam of JOBST® Elvarex® Soft both smooth and gentle on the skin.

The comfortable edging seam at the top of the stocking is designed to be comfortable on the skin, does not lead to constrictions and provides the required stability and durability to the fabric edge.

Made for compliance

JOBST® Elvarex® Soft – Capri and Bermuda

Two new styles, Capri and Bermuda, perfectly complement the range of JOBST® Elvarex® Soft garments.

NEW – Available in Capri and Bermuda styles

Capri's and Bermuda's can be worn in combination with other garments. Example: Capri and a knee high or a Bermuda with a thigh high. These combinations are easier to don for those patients with limited range of motion and help with long-term compliance. A two piece garment can often lead to a better fit, especially when there are very large leg circumferences. The ribbed comfort waistband doesn't dig in and provides a secure hold. These are also available with an adjustable waist band. The tried and true slip form of JOBST® Elvarex® is also used in JOBST® Elvarex® Soft. Its anatomically correct shaping helps ensure an optimal fit.

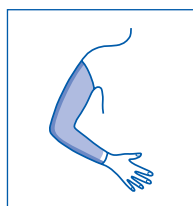

The panty, with its ribbed comfort waistband does not constrict and provides secure stability. The garment is also available with an adjustable waistband. Overall, the panty has an attractive, fashionable design.

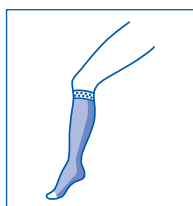

The time-proven slip form design of JOBST® Elvarex® is also used in JOBST® Elvarex® Soft. Its anatomically correct shaping guarantees optimum fit.
