

THE RIGHT COMPRESSION GARMENT EVERY TIME

SoftFit technology is the perfect addition to the offerings of knitted welt and traditional silicone band. Having more options to offer your patients facilitates their commitment to compression therapy in all stages of treatment, which may help delay, or even prevent, progression of their lymphedema.

LATENT: STAGE 0	MILD: STAGE 1	MODERATE: STAGE 2	SEVERE: STAGE 3
A subclinical state where swelling is not evident despite impaired lymph transport. This stage may exist for months or years before edema becomes evident.	Early accumulation of fluid relatively high in protein content that subsides with limb elevation. Pitting may occur.	Limb elevation alone rarely reduces swelling and pitting may or may not occur as tissue fibrosis develops.	Lymphostatic elephantiasis. Pitting is absent and trophic skin changes such as acanthosis, fat deposits, and warty overgrowths develop.

SoftFit™ Technology

ADVANCED LYMPHEDEMA MANAGEMENT WITH REVOLUTIONARY TECHNOLOGY

THERAPIES. HAND IN HAND.

A GRIPPING NEW IDEA

JOBST's new, innovative SoftFit technology is a unique system of silicone yarns knitted into the welt of our compression garments. It provides gentle, seamless friction on the skin, allowing for decreased chance for constriction and less slipping down.

LOOKS GOOD, FEELS GOOD

With SoftFit technology, garments are not only visually appealing and more comfortable to wear, they provide precisely the right amount of pressure, right where it is needed.

IMPROVED COMPLIANCE, IMPROVED QUALITY OF LIFE

Compression garments that feel comfortable lead to greater patient compliance.

You'll hear less complaints about bulkiness and discomfort, because new SoftFit technology is smoother and more comfortable to wear.

MORE OPTIONS, HAPPIER PATIENTS

With SoftFit technology, there is a wider variety of compression garments to choose from when treating your patients and their lymphedema.

IMPROVED SOLUTIONS, ENHANCED THERAPY

SoftFit technology is a new and unique benchmark standard in the management of lymphedema.

As the market leader, JOBST® has always been committed to finding the best possible solutions to increase therapy compliance and achieve greater patient acceptance.

The high friction SoftFit silicone yarn we have knitted into the welt at the top of the garment reduces the tight grip other compression garments need to stay up. This allows them to stay in place during activity and encourages greater compliance, all while being much more comfortable to wear. All this leads to improved quality of life for your patients.

This revolutionary technology raises the level of therapy for your patients, making lymphedema management significantly more successful.
